Subject: High Flow - SV-CWCM Notice - Force Majeure

Eugenia & Stephanie:

This confirms my telephone conversation at 1520.

The CPG has succeeded today in collecting all peak hydrograph samples and the high tide samples from Kill van Kull and Arthur Kill.

The CPG is scheduled to collect low tide samples at the two Kills at 1600 today.

The winds have now picked up considerably during the day. All boats are at the dock at Liberty Landing in Jersey City facing a strong east wind with 4 to 6 ft seas. The Coast Guard has issued a Small Craft Advisory (SCA) for 1800 this evening thru Tuesday morning due to worsening conditions - boats and crews would be on the water after the SCA has gone into affect.

The OSI boat captains have indicated that it is unsafe conditions to cross the Bay. The CPG and its contractors (AECOM and OSI) will stand down for weather.

The CPG will the demobilize the two teams and several support staff and not collect a 1600 or 0400 sample (next low tide on June 11).

The CPG and its contractors will be stand down and write a non-conformance. If the EPA would like the CPG to collect the low tide sample in the Kills then the CPG would collect them during the falling limb next week.

This constitutes a Force Majeure notification under the LPRSA RI/FS AOC.

Please contact me with any questions.

R/
Rob
